

MASTERING GUITAR FRET BOARD

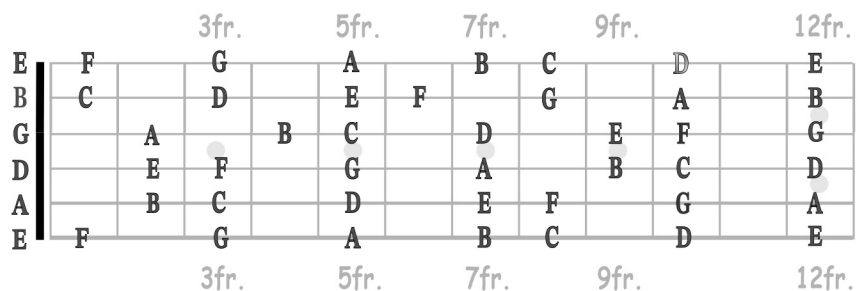

Learning to play guitar feels amazing at first, but the challenge of remembering notes all over the fretboard makes many people quit their music journey much sooner than necessary.

Now the capybara family come to help, will they make it easier?

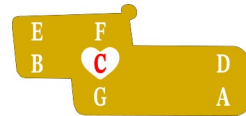

The goal is to remember all notes ASAP!

HOW TO REMEMBER GUITAR FRETTS IN 3 SETPS?

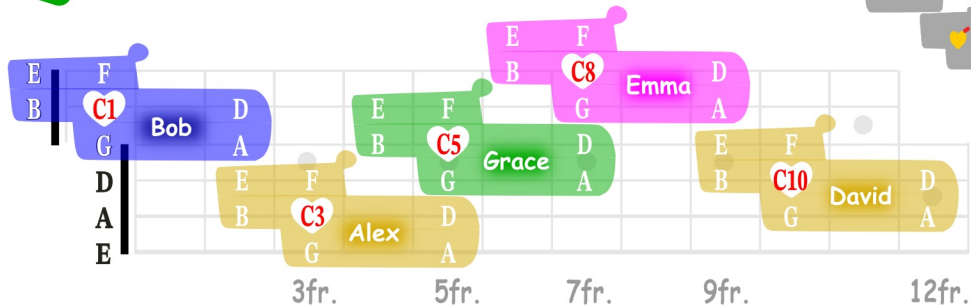

1

Define the capybara pattern (Page 3)

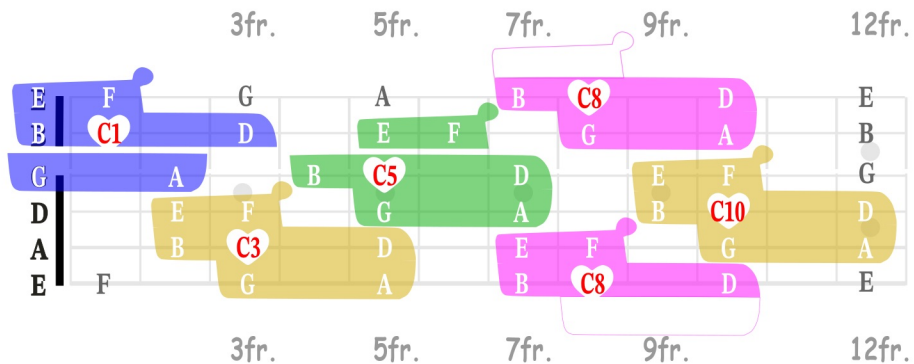

2

Build the "X" fret map (Page 4)

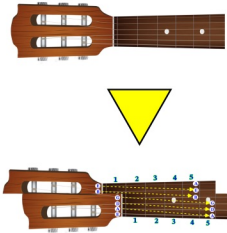

3

Transform the "X" fret map (Page 5)

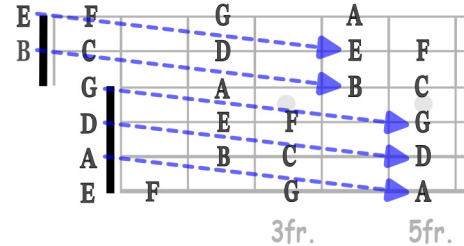

THE CAPYBARA PATTERN

We will modify guitar for capybaras:

Guitar strings are 5 frets apart except B-G.

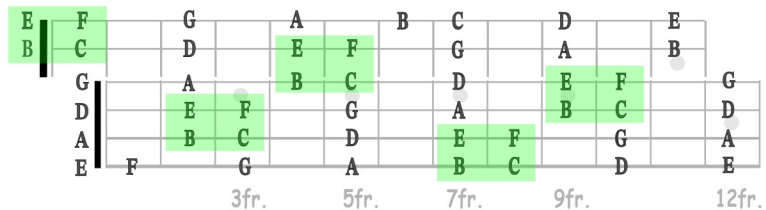

To make it even, we split the neck, move E/B string 1 fret left.

The patterns show up:

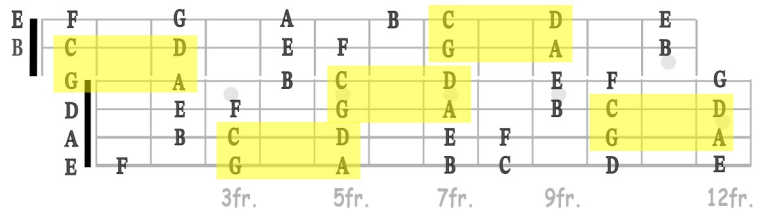

The dense guards:

E	F
B	C

The sparse guards:

C		D
G		A

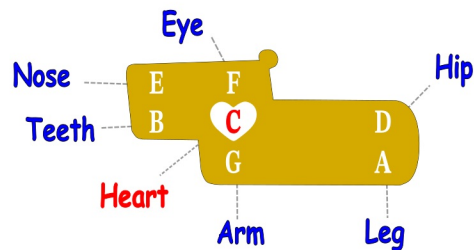

Shape the Capybara:

E	F	+	C		D
B	C		G		A

+

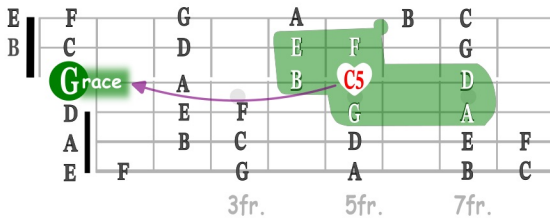

=

With C note as the loving heart

CAPYBARAS ON GUITAR NECK

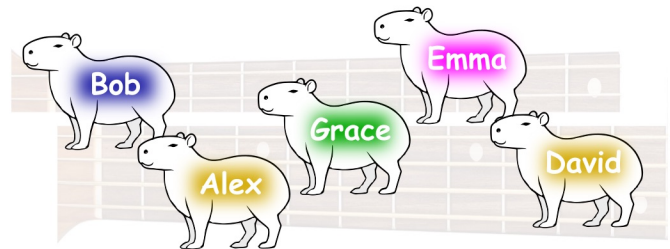

Meet capybara Grace:

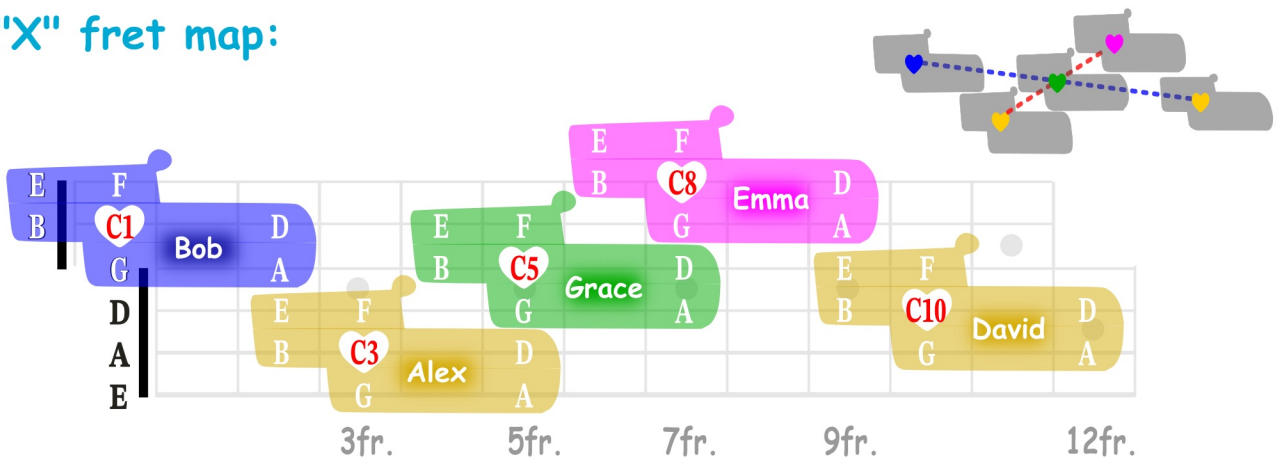

- Each capybara's name comes from the string where the heart is located.
- On G string, the capybara is named as Grace.
- Grace's heart is on 5th fret, we mark the C note as C5.

The capybara family:

Bob, dad, B string, C1
 Alex, brother, A string, C3
 Grace, mom, G string, C5
 Emma, sister, E string, C8
 David, baby, D string, C10

The "X" fret map:

Locate each capybara by his/her heart.

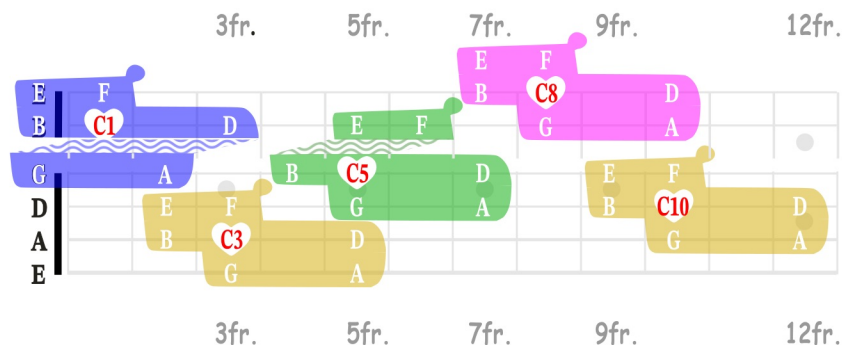

- Use the capybara's name to identify the string.
- Use the C note code to identify the fret.

Once his/her heart is located, 7 notes get into place.

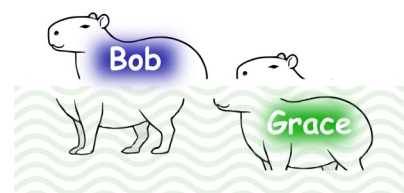

But this is the modified guitar, we will restore the neck next.

THE REAL PICTURE

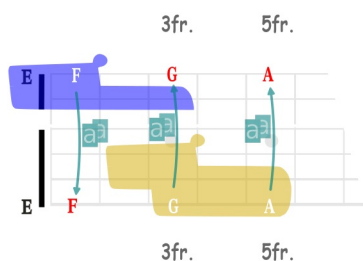

Restore the guitar for real world:

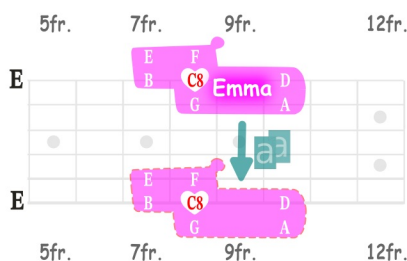

- Bob's body is distorted
- Grace's head is distorted

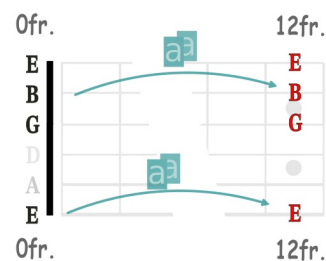

Fill in blanks:

Exchange missing notes
between Hi E and Lo E

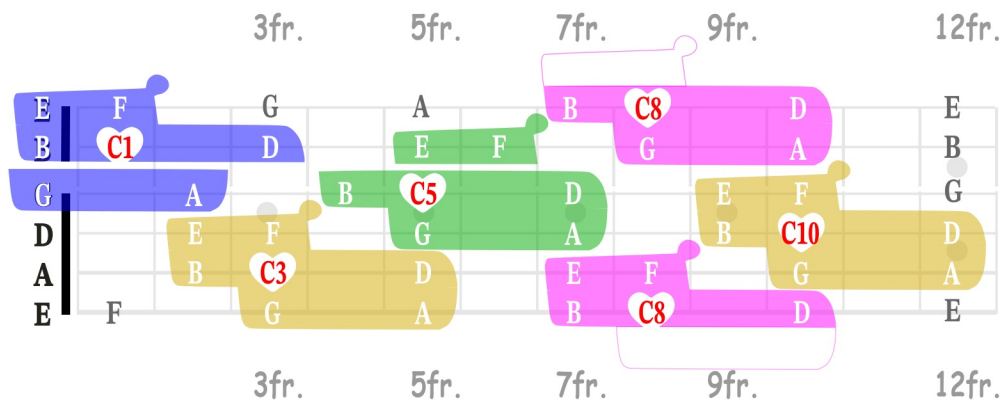

Copy Emma from Hi E
string to Lo E string

Copy missing notes
from fret 0 to fret 12

Full map with every notes:
